CALL LOCAL DEALER FOR INFORMATION

!! SAFETY MESSAGES !!

Your safety, and the safety of others, is very important, and operating this unit safely is an important responsibility.

To help you make informed decisions about safety, we have provided operating procedures and other safety information in the manual. This information informs you of potential hazards that could hurt you or others.

It is not practical or possible to warn you of all the hazards associated with operating this unit. You must use your own good judgment.

This unit is intended for commercial use. It is designed to clean hard floors in an indoor environment, with the recommended pads/ brushes, and cleaning solutions.

1. DO NOT OPERATE UNIT:

- * Unless trained and authorized.
- * Unless operator manual is read, and understood.
- * If unit is not in proper condition.

2. WHEN OPERATING UNIT:

- * Remove loose objects from the floor that may be projected from the revolving brushes.
- * Keep hands and feet away from revolving brushes and brooms.
- * Do not run machine where flammable liquids are present.
- * Use extreme caution when maneuvering.

3. BEFORE LEAVING:

- * Make sure machine is turned off.
- * Stop on level surfaces.
- * Disconnect batteries.

4. BEFORE SERVICING:

- * Stop on level surfaces, and secure machine.
- * Disconnect batteries.

!! SAFETY PRECAUTIONS !!

WARNING: Hazardous voltage. Shock or electrocution can result. Always disconnect the batteries before servicing this machine.

WARNING: Batteries emit hydrogen gases, explosion or fire can result. Keep sparks and open flames away.

WARNING: Charge unit only in a well-ventilated area, and keep battery compartment open when charging. Explosion or fire could result.

WARNING: Battery acid can cause burns. Wear protective eyewear and gloves when servicing batteries.

WARNING: Do not store outdoors or pressure wash. Prevent from getting electronic components wet.

WARNING: The use of parts and solutions other than recommended by the manufacturer may cause damage.

WARNING: Dress Safely. Do not wear rings or metal wristwatches while working on this machine. They can cause an electrical short, which can cause serious burns. Do not work on this machine while wearing a tie, scarf or other loose, dangling neckwear or clothing. These loose items can tangle in the rotating parts and cause serious injury or even death.

WARNING: Do not use the machine as a step ladder or chair.

WARNING: Do not ride on this machine. It was not designed to carry passengers.

WARNING: Do not operate this machine on ramps or uneven surfaces. When climbing a ramp, always drive the machine in forward straight up or down the ramp. Never drive across the incline. DO NOT BACK DOWN RAMPS!

WARNING: Do not use machine to apply or pick up flammable liquids. **Fire or Explosion Hazard!**

WARNING: Always use the charger provided by the manufacturer to charge the machine. It is an automatic charger, specifically designed to charge at the appropriate rate. If you must use a different charger, disconnect the batteries before charging. This will prevent damage to the electronic speed controller.

WARNING: Understand the dynamic braking system before you operate the machine on slick ramps. Machine does not coast. Releasing the handlebar "green" drive buttons, will automatically apply braking force, and stop the machine.

WARNING: Do not park the machine on ramps or slopes. This machine does not have a parking brake. It must always be parked on level ground.

WARNING: Do not operate the machine if any parts have been removed or damaged.

WARNING: Do not remove, paint over, or destroy Warning Decals. If Warning Decals become damaged, they must be replaced.

WARNING: Do not operate machine in unsafe condition. If the machine is in need of repair or is in any way unsafe to operate, the matter should be reported immediately to the shift supervisor. Do not operate the machine until it is returned to proper operating condition.

WARNING: This machine must only be operated by a trained operator. As part of his or her training, they must read this manual thoroughly. If extra copies are needed contact your local dealer.

WARNING: Always turn off the machine before leaving it unattended.

WARNING: Do not operate this scrubber over floor outlets. **SEVERE INJURY!**

CONTROL FUNCTIONS

1. Serial Number Plate: Used to identify the date of manufacture & customer information.
2. Main Power Switch: Turns the machine on and off.
3. Speed Control Knob: Controls the drive speed on the machine. Rotate (clockwise) to increase speed.
4. Reverse Switch: Depress down to drive in reverse. Reverse is set at 50% speed for safety.
5. LCD: Contains Battery Gauge, (3) Hour Meters, Down Pressure Gauge, Operation Icons.
6. Recharge Plug: Use only 24-V/36-amp charger provided with the machine.
7. LCD Menu Select: Changes the LCD from screen #1 to #2 or #3.
8. Brush Pressure Switch: Controls brush pressure (1-5) 5 being the highest.
9. Brush Up/Down Switch: Brushes will only run when in the down position. Raise to transport only.
10. Solution Control Knob: Controls the solution flow rate, when the solution switch is on.
11. Drive Control Buttons: Depress either of the (2) switches to drive forward, and release to stop.
12. Handle Bar: Use both hands to operate at all times.
13. Squeegee Lift Lever: Rotate to the right to lower squeegee & engage the vacuum motor.
14. Vacuum Motor Cover: Mounts Vacuum Motor & Seals to hose.
15. Recovery Tank Access: Used to flush out buildup that may accumulate inside of tank.
16. Solution Tank: Holds 30 gallons of cleaning detergent. Max temp is 140 F or 60 C.
17. Recovery Tank: Holds 30 gallons of dirty recovery water. Max temp is 140 F or 60 C.
18. Rear Casters: Twin casters for stability.
19. Drive Wheels: Provide propulsion for machine.
20. Brush Shrouds: Protect scrub brushes from damage, and control splashing. Open to change brushes.
21. Solution Fill Door: Used to refill the solution tank with cleaning solutions.
22. Rec. Drain Hose used to completely drain dirty recovery water from tank. Always flush out completely.
23. Sol. Drain Hose used to drain cleaning solution, and as a level indicator of remaining solution onboard.
24. Backup Wheels.
25. Vacuum Hose: Vacuumizes squeegee. Keep free and clear of blockage for optimum performance.
26. Squeegee: Recovers dirty water from floor. Keep clean and replace blades when worn.
27. Recovery Tank Cleanout Door: Provides access to Recovery Tank floor for sludge removal.
28. Wall Rollers: Protects machine and walls from some collision damage.
29. Adjustment Knob: Adjusts pitch of squeegee. The deflection should be even across entire blade.
30. Corner Wheels.

MACHINE PREP

UNCRATING MACHINE

Carefully check the crate for any signs of damage. Check the crate to ensure that all accessories are included. Batteries are in the unit. The squeegee, brushes, and other items are in the crate.

To uncrate the machine, remove banding from around the crate. Take off the top and sides and dispose of properly. Remove banding from machine. Remove the chocks around the drive wheels. Fold down ramp, and roll machine off of the base.

NOTIFY THE CARRIER IMMEDIATELY IF CONCEALED DAMAGE IS DISCOVERED.

CONNECTING BATTERIES

Your machine is equipped with (4) 6 volt, deep cycle, 395 amp hour batteries, which form a 24 volt system.

1. Turn all switches to the OFF position.
2. Hinge open the rear compartment lid to access the batteries.
3. All four cables should be tightly connected to the batteries. Locate any loose one's and tighten. This require's a 9/16" wrench. Do not leave connection loose. Loose connections burn cable. (See Fig. 1)
4. Turn on main power switch and check the battery condition meter to ensure correct installation. Charge batteries if needed. (See BATTERY CHARGING)

Fig. 1

MACHINE SETUP

ATTACHING SQUEEGEE

1. Lower the squeegee mounting plate by releasing the lever. (See Fig. 2)

Fig. 2

2. Loosen the two wingnuts on the squeegee and slide them into the slots in the squeegee mounting plate. The squeegee trail wheels should face outward.
3. Tighten the two wingnuts, and connect vacuum hose from the machine to the squeegee. (See Fig. 3)
4. You may need to adjust the squeegee pitch, by using the pitch adjustment knob.

Fig. 3

WARNING: TURN OFF MACHINE BEFORE INSTALLING BRUSHES.

INSTALLING DISK BRUSH OR PAD

1. Raise scrub head. Turn the machine on and press the bottom half of the brush up/down on/off switch (o).
2. Pull pin on channel & open brush guards to access the drivers. (See Fig. 4)

Fig. 4

3. Select the correct pads or brushes that best meet your cleaning application. Consult your local dealer for assistance. (See Fig. 5 on page 12)
4. PAD INSTALLATION Attach pads to pad drivers before connecting drivers to motor hub. Remove the centerlock ring from the pad driver and position the pad on the pad driver, and replace the center locking ring.
5. Attach brushes or pads to motor hubs. Squeeze the scissor locking device and lift brush up on to the motor drive hub. Make sure the scissors close and lock once the brushes are on. (See Fig. 6)

Fig. 6

6. Close the brush shrouds and tighten the wingnuts on either side.

INSTALLING CYLINDRICAL BRUSH

1. Unscrew the three wingnuts on the brush access door and remove the door. Be careful not to lose the wingnuts and lock washers. (See Fig. 7)

Fig. 7

2. Slide the brushes in, one at a time. When you get the brush on the driver, spin it with your hand until you feel it catch and drop in. When both brushes are in, replace the door and the fasteners. (See Fig. 8)

Fig. 8

NOTE: IF BRUSHES ARE NOT FULLY ENGAGED WITH THE DRIVERS. THE BRUSHES WILL BE DAMAGED. DO NOT FORCE THE ACCESS DOOR BACK ON. THIS USUALLY INDICATES IMPROPER INSTALLATION.

FILLING SOLUTION TANK

1. Transport the machine to the filling station. Raise the scrub head and squeegee when transporting.
2. Turn machine off.
3. Open front lid at the front of the machine and unscrew clear solution lid to fill the tank with up to 30 gallons of clean water. The clear tube at the rear of the machine indicates the amount of water in the tank.
(See Fig.9)
4. Add cleaning chemical. Use the proper dilution ratio indicated on the bottle. A proportioning system is preferred.

*Use only nonflammable commercial cleaning chemicals. If you need assistance in selecting a proper chemical call 1-800-634-4060.

Fig. 9

OPERATION

Read and understand the safety section on Page 6 & 7 before operating machine.

PRE-CLEANING CHECK LIST

- * Check battery condition gauge to make sure batteries are fully charged.
- * Check condition of pads or brushes.
- * Check condition of squeegee blades.

ONE PASS SCRUBBING

STEPS: (See Fig. 10)

1. Turn machine on, make sure the speed knob is at a low setting.
2. Lower squeegee by moving the lift lever all the way to the right.
3. Set brush pressure using Black Toggle (#1). Start on #1 or #2.
4. Lower scrub head to the floor using Black Rocker (#2).
5. Adjust the solution control knob to the desired setting (#3).
6. Begin scrubbing by holding the green drive buttons. Adjust the speed control knob to the desired setting.
7. To operate machine in reverse, simply pull the reverse switch back towards the handlebar. Do not push green buttons when reversing.
8. To stop the machine, let go of the green control buttons or reverse switch.

Fig. 10

OPERATING HINTS

1. Observe the amount of solution the machine is dispensing on the floor and adjust to the desired flow. To increase the solution flow rate, rotate the solution control knob clockwise. To shut the solution off completely just release the drive buttons. Solution stops when brushes stop.
2. Keep an eye on foam buildup in the recovery tank. If excess foam begins to develop, pour a recommended foam control solution into the recovery tank. Foam is usually an indication of excessive soap, so a better answer may be to use less chemical.
3. Always operate at lower speeds when scrubbing around walls and objects. You should also reduce the speed to maintain control when turning.
4. If the squeegee starts to streak, raise and wipe the blades with a clean cloth. If the problem continues, check the blades for wear or damage, and rotate if needed. You need to presweep before scrubbing if you are using a disk machine. Always be sure to check the squeegee hose for clog's at the recovery tank elbow.
5. Change or turn over pads when dirty. Rotate the scrub brushes every week.
6. Stay clear of objects protruding from the floor, such as sockets, grates, pipes, for they will damage the pads and squeegee blades, or create dangerous situations.
7. During brief stops, you do not have to turn anything off. The brushes and solution will automatically stop when the green control buttons are released.
8. Always keep an eye on your LCD window. They are there to help you scrub more efficiently, by letting you know the status of that particular system at a glance. If the battery gauge is reading low, you must stop immediately and recharge. Running the battery dead will result in damage to the battery.
9. When you run out of solution, raise the brushes, and continue to vacuum the remaining water until it is consumed. The solution drain hose is also used to indicate the level of detergent remaining in the tank.
10. When you are ready to stop, pick up the brushes, turn off the solution switch, pick up the squeegee, and drive the machine back to the charging area. Be sure to drain both tanks before storing machine for an extended period of time.

NOTE: These are only approximations. The customer should always try any brush in an inconspicuous area.

DRAINING TANKS

DRAINING RECOVERY TANK

Always empty recovery tank when refilling the solution tank. To drain the recovery tank, perform the following steps.

1. Remove drain hose from the expansion plug holder by turning the T-Handle counter clockwise, lower to drain.
(See Fig. 11A & 11B)

Fig. 11A

Fig. 11B

2. Rinse the recovery tank after every use. This will prevent heavy buildup on the bottom of the tank, foul odors, and clogging of the drain hose. (See Fig. 11C)
3. Once tank is empty, put drain hose back on the plug and tighten by turning clockwise.
4. You may use the cleanout port for sludge removal. (See Fig. 11D)

Fig. 11C

Fig. 11D

DRAINING SOLUTION TANK

To drain leftover cleaning solution from the solution tank, perform the following steps.

1. Remove end cap and clear sight tube/drain hose off the bracket, lower to drain. (See Fig. 12A & 12B)
2. Rinse out tank and solution flow system with clean water.
3. Reconnect the cap & hose to bracket.

Fig. 12A

Fig. 12B

BATTERY CHARGING

CAUTION: The following instructions are intended for the 24V charger supplied with the machine. (Part # 7-244)

CHARGER SPECIFICATIONS

- * Output voltage of 24 Volts.
- * Output current of 36 Amps.
- * Input 110v/60hz
- * Automatic shutoff circuit.
- * Made for deep cycle batteries.

DANGER: Always charge batteries in a well ventilated area. Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and flame away. Shield eyes when servicing batteries and avoid contact with battery acid.

1. Transport machine to a well ventilated area for charging.
2. Turn the machine off.
3. Open the rear lid to access batteries.
4. Check the water level in each battery. Do not charge the machine if the water is not slightly higher than the plates. If needed, add enough distilled water to 3/4" over the plates. Do not overfill! Batteries can overflow during charging. Replace caps before charging.
5. Connect the red charger plug into the battery charging port located at the rear of the machine. (See Fig.12)
6. With the red charger plug disconnected from the machine, plug the charger power cord into a grounded wall outlet.

Fig. 12

7. The charger will automatically begin charging, and automatically shut off when fully charged. (See charger gauge)
8. After the charger has turned off, unplug the red plug from the machine and disconnect charger from the wall outlet.
9. Recheck the cell levels after charging. If needed, add distilled water up to the correct level. Be certain to replace the caps securely and to wipe off the top of the batteries with a clean cloth. Discard cloth.

MAINTENANCE

DAILY MAINTENANCE

1. Remove and clean pads or brushes. Never use soiled pads when cleaning. Replace pads frequently.
2. Remove and clean debris from the float shut-off screen located inside the recovery tank.
3. Drain and rinse tanks thoroughly. Inspect vacuum hose for any objects obstructing the air flow.
4. Raise squeegee and wipe blades with a clean cloth. Store squeegee in the raised position to prevent damage or settling of the blades.

5. Wipe down machine if needed. Use a non-abrasive, non-solvent cleaner, or a clean damp cloth.
6. Recharge the batteries if needed.

WEEKLY MAINTENANCE

1. Check water level in each cell of the batteries, and fill as needed. Always use distilled water to refill batteries. Batteries **SHOULD NOT** be filled to the tops of the caps.

FILL BATTERIES APPROXIMATELY 3/4" TO 1" ABOVE THE LEAD PLATES. OVERFILLING WILL CAUSE THE BATTERIES TO LEAK DURING CHARGING. THE CHARGING PROCESS CREATES GAS BUBBLES INSIDE THE BATTERY. WHICH EFFECTIVELY INCREASES THE VOLUME OF THE ELECTROLITE.

2. Clean battery tops to prevent corrosion.
3. Rotate brushes. Rotate the left to right and right to left. On cylindrical models from front to back.

MONTHLY MAINTENANCE

1. Lubricate rear casters with a waterproof grease.
2. Check machine for water leaks and loose nuts and bolts.

STORING MACHINE

1. Be sure to flush the tanks out completely, and to drain all water from the machine.
2. Remove the recovery tank lid to promote air circulation.
3. Raise brushes and squeegee.

<u>PROBLEM</u>	<u>CAUSE</u>	<u>SOLUTION</u>
No power, nothing operates	Faulty main switch Batteries need charging Faulty battery(s) Loose battery cable Interrupt switch on charger plug is stuck	Contact local servicing dealer See CHARGING BATTERIES Replace battery(s) Tighten loose cable Unstick switch
Brush motor(s) do not operate	Brush deck is not down Drive buttons are not engaged Brush deck current overload Carbon brushes worn Faulty brush motor or wires	Put brush deck down w/ switch Engage drive buttons Turn power off for 5 second's Then turn back on Contact local servicing dealer Contact local servicing dealer
Drive motor does not operate	Speed control turned down Recharge switch misadjusted Faulty speed controller or wires Faulty drive motor Faulty wiring Carbon brushes worn	Turn up speed control Contact local servicing dealer Contact local servicing dealer Contact local servicing dealer Contact local servicing dealer Contact local servicing dealer
Vacuum motor does not operate	Squeegee is in the up position Faulty vacuum switch Vacuum current overload Faulty vacuum motor Carbon brushes worn	Rotate squeegee lift lever down Contact local servicing dealer Turn main power off and then turn on Contact local servicing dealer Contact local servicing dealer
Drive motor runs incorrectly	Faulty speed controller or wires Faulty potentiometer Loose wires	Contact local servicing dealer Contact local servicing dealer Contact local servicing dealer
Insufficient solution flow	Solution tank low Flow knob turned down Solution filter clogged Solution line clogged Solution valve clogged	Refill Sol. tank, drain Rec. tank Turn knob counter-clockwise Remove cover and clean Remove and blow out with compressed air Remove cover and clean

TROUBLE SHOOTING

<u>PROBLEM</u>	<u>CAUSE</u>	<u>SOLUTION</u>
No solution flow	No solution in tank Solution knob OFF Faulty solution valve Faulty solution reostat	Fill solution tank Turn solution knob counter-clockwise Contact local servicing dealer Contact local servicing dealer
Poor water recovery	Recovery tank is full Ball/Screen in recovery Tank is clogged Vacuum hose is clogged Squeegee is clogged Squeegee blades worn Faulty vacuum hose Vac motor gasket torn Vac motor to tank hose leaks Drain plug loose Rec. tank lid loose Vac motor faulty Battery charge is low	Empty recovery tank Remove screen and clean Remove debris Remove debris Rotate or Replace blades Contact local servicing dealer Contact local servicing dealer Contact local servicing dealer Tighten drain plug Tighten lid Contact local servicing dealer Charge batteries overnight
Poor water recovery on turns	Squeegee swing binding Incorrect squeegee size	Contact local servicing dealer Contact local servicing dealer
Casters noisy	Bearings dry Faulty caster	Grease caster bearings Contact local servicing dealer
Poor Traction	Excessive brush pressure Worn drive tires Heavy soap concentration Tires damaged from chemical	Reduce pressure with switch Contact local servicing dealer Reduce detergent ratio Change chemical or change to black tires

SPARE PARTS BOOK

Walk-Behind Scrubbers

Spare parts are sold through authorized Dealers. If you have forgotten your dealer's name, or you have moved the machine to a new location, please **Call us at: 1 (800) 634-4060, or Fax us at: 1 (866) 901-3335** and we will re-establish a dealer contact for you.

TO ORDER PARTS:

Please provide the machine's Serial No. with your order. Normally, ordinary parts orders are shipped out the same day the order is received.

EMERGENCY ORDERS:

Within the Continental United States, We can supply any part that weighs under 70lbs within 3 business days, not counting weekends or National Holidays.

However, if parts are ordered on an "Emergency" basis, this means that we will ship them by fastest means, generally by air courier service, at the customers expense.

FREIGHT:

Within the United States, the normal shipment method is by customer choice, while the emergency shipment method is by R.P.S. choice - normally by fastest means. This means that emergency orders will generally cost the customer more than normal orders.

In both cases, the customer is responsible for all freight costs.

Model 29ss/35ss
